

Helitank

Helitanks are purpose-built for use on flat terrain or minimal slopes.

These tanks were designed for Type 2 helicopters and can deliver critical water resources to exhausted fire crews in hard-to-reach spots. They can provide a steady supply of fresh drinking water or simply a supply of standard water for mop-up operations. The Helitank has proven itself as a trusted water supply tool. It is available in two sizes and two models, for either standard or potable (drinking) water.

Features

- Tank is constructed of durable and rugged fabric that is mold- and mildew-resistant;
- The harness is constructed of heavy-duty tie-down webbing for strong and secure transport;
- It comes with a 4" (102 mm) filler cap and a 1.5" (380 mm) discharge hose with ball valve shut-off;
- Its compact design makes it easy to store; and
- It's easy to clean and repair.
